PROFESSIONAL SUMMARY

Frontend Engineer with Fullstack experience and 4+ years of building production SaaS products.

I combine product thinking, ownership, and strong technical execution to deliver features end-to-end.

While my primary focus is frontend development with React, TypeScript, and Next.js, I regularly work across backend services, APIs, databases, real-time systems, and application infrastructure.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), Next.js, HTML5, CSS3, Tailwind CSS

State Management & Data: React Query, Zustand, Redux Toolkit, Context API

Backend & Real-Time: Node.js, Express, REST APIs, PostgreSQL, WebSockets, Socket.io

Tools: Git, Vite, i18n, RTL/LTR Development

PROFESSIONAL EXPERIENCE

Frontend / Fullstack Engineer

Tel Aviv, Israel | 2021 – Present

Cinten (formerly BeST)

- Lead development of production features from planning through deployment in a B2B SaaS platform.
- Led technical decisions for multiple frontend features and collaborated on backend implementation to deliver end-to-end solutions.
- Designed and implemented real-time functionality using WebSockets, replacing polling-based workflows and improving responsiveness.
- Developed and delivered a real-time chat system integrated into existing product workflows.
- Improved performance of data-intensive interfaces through list virtualization and rendering optimizations.
- Reduced loading times by identifying opportunities for parallel data fetching and optimizing client-server communication.
- Collaborated closely with Product, Design, Backend, and QA teams to deliver user-focused solutions.

PROJECTS

Cash Plus

Personal finance SaaS platform that helps users manage future financial commitments by transforming unstructured email data into actionable financial insights.

- Designed and built the platform end-to-end across frontend, backend, database, and infrastructure layers.
- Developed a multi-stage commitment detection pipeline combining Gmail queries, regex extraction, and AI-assisted classification.
- Built backend services for background processing, real-time updates, notifications, and data synchronization using Node.js, Redis, BullMQ, and Socket.io.
- Implemented shared validation and data contracts across client and server to improve reliability and prevent inconsistencies.
- Validated product assumptions through active beta usage and real-world financial data.

Technologies: React, TypeScript, Next.js, Node.js, PostgreSQL, Redis, BullMQ, Gmail API, Socket.io

i18n Inspector

[GitHub Link](#)

Published open-source npm package for analyzing and managing localization files across multilingual applications.

- Built and published an npm package for detecting missing translation keys, unused strings, and structural inconsistencies across locales.
- Designed to improve maintainability and reliability of large-scale internationalized applications.
- Helps development teams identify localization issues early and maintain consistency between languages.
- Published as a publicly available npm package.

Technologies: TypeScript, Node.js, i18n

EDUCATION

Frontend Development Program — SVCCollege

2020 – 2021

Final Grade: 97 | Capstone project delivered to production
